1 2015 IOMA SURVEY HIGHLIGHTS

Derivatives volumes grew strongly in 2015, up 12% on 2014. This is the first time among the WFE respondent member universe that traded volumes have exceeded 2011 levels. The Asia Pacific region was responsible for a large proportion of this growth (volumes were up 36% on the previous year). While equity derivatives remain the most actively traded asset class, currency and commodity derivatives experienced the largest volume growth on 2014 (37% and 26% respectively). Commodity futures overtook single stock options as the most actively traded contract. Volumes in the “other derivatives” category (a catch-all category for more exotic derivatives) were up 51%, although still off a low base.

2 INTRODUCTION AND MARKET OVERVIEW

The World Federation of Exchanges conducts an annual survey of the derivatives markets operated by its members, affiliates¹ and correspondents² (hereafter referred to collectively as its ‘members’). The survey report is compiled from questionnaire responses supplied by exchanges and their clearinghouses as well as data collected from exchange websites. The authors wish to thank those exchanges that responded to the questionnaire and especially exchange staff who gave additional assistance in response to enquiries.

This report focuses on derivatives trading and clearing activity in 2015 and covers responses from 47 WFE members (some of whom represent more than one trading and/or clearing venue). The trading figures presented in this report cover a full set of indicators (number of traded contracts, notional value of traded contracts, open interest, notional outstanding amounts, number of trades and paid premium) and are broken down into sixteen main product lines:

- Single Stock Options and Futures
- Stock Index Options and Futures
- Exchange Traded Funds Options and Futures
- Short-Term Interest Rate (STIR) Options and Futures
- Long-Term Interest Rate (LTIR) Options and Futures
- Currency Options and Futures
- Commodity Options and Futures
- Other Derivatives Options and Futures

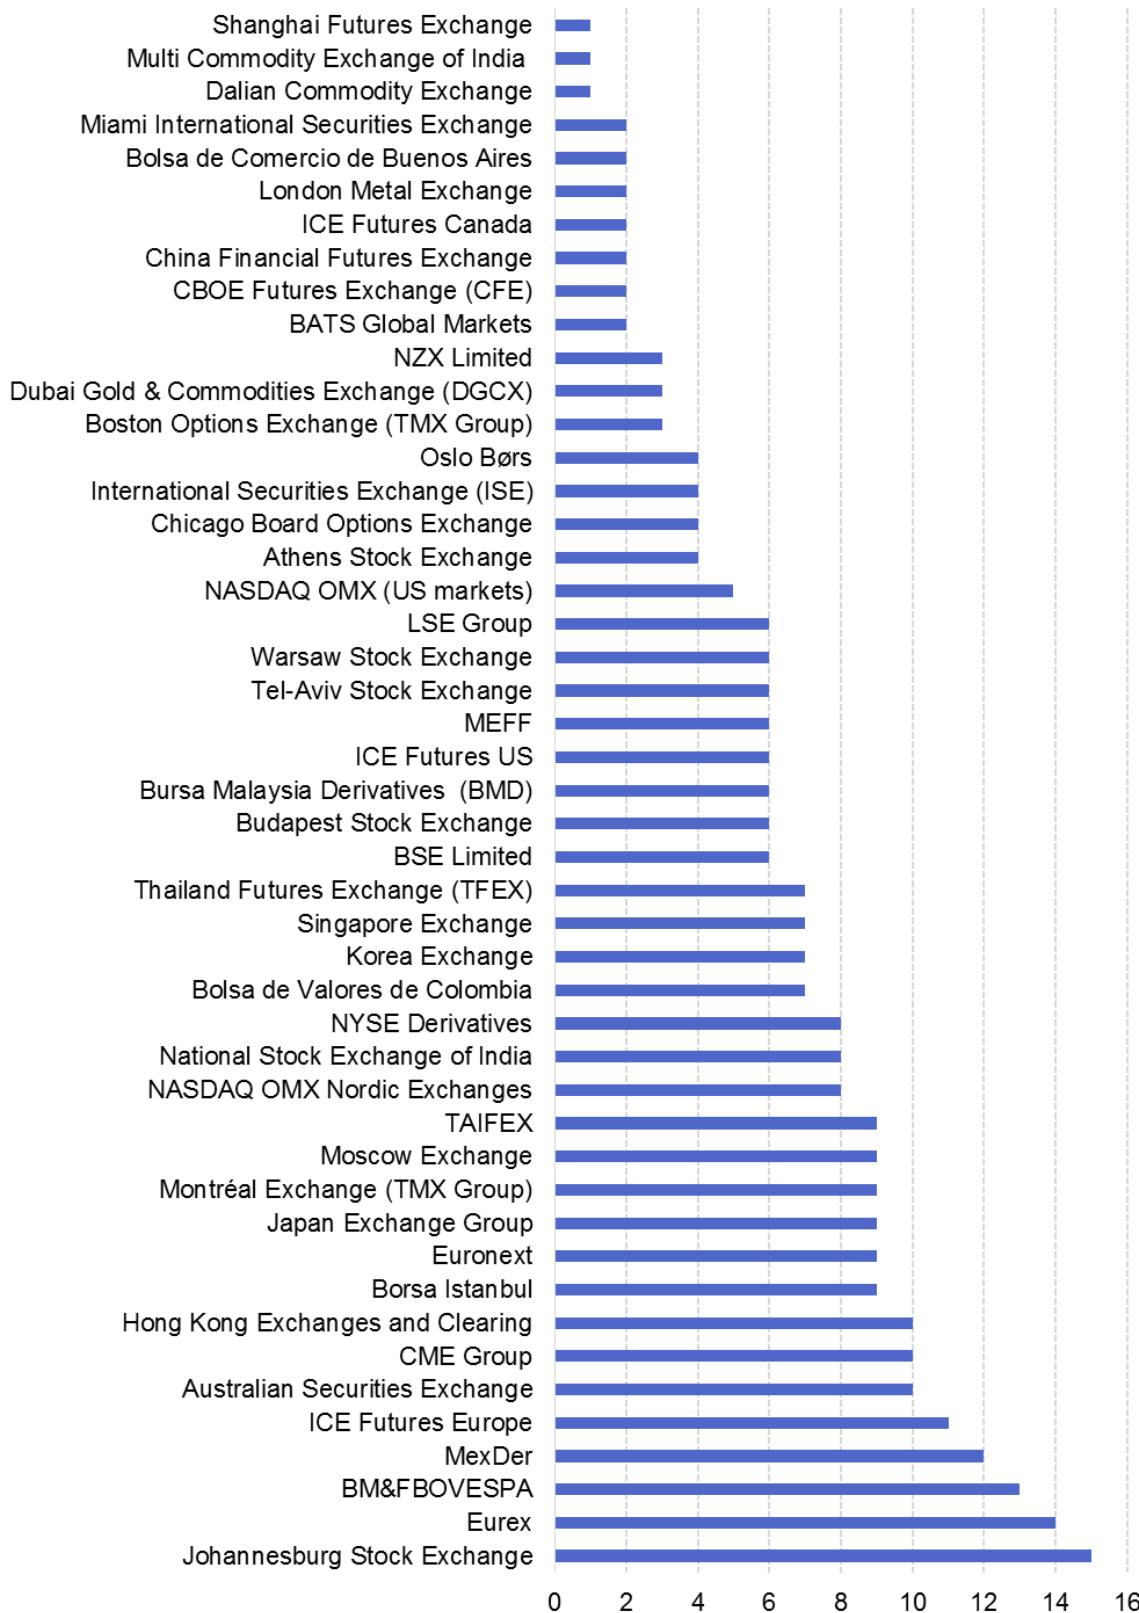

Some exchanges taking part in this survey provide a wide range of derivatives contracts, while others specialize in a single area of the market. The mean and median numbers of product lines offered by responding exchanges are the same as 2014 namely 6.2 and 6 products per exchange respectively. The Johannesburg Stock Exchange (JSE), with 15 product lines, still has the largest number of product lines but the number of exchanges with only one product line dropped from six last year to only three this year.

Within product lines, stock index options and futures are the most commonly listed products (offered by 80% of the responding exchanges), followed closely by commodities futures.

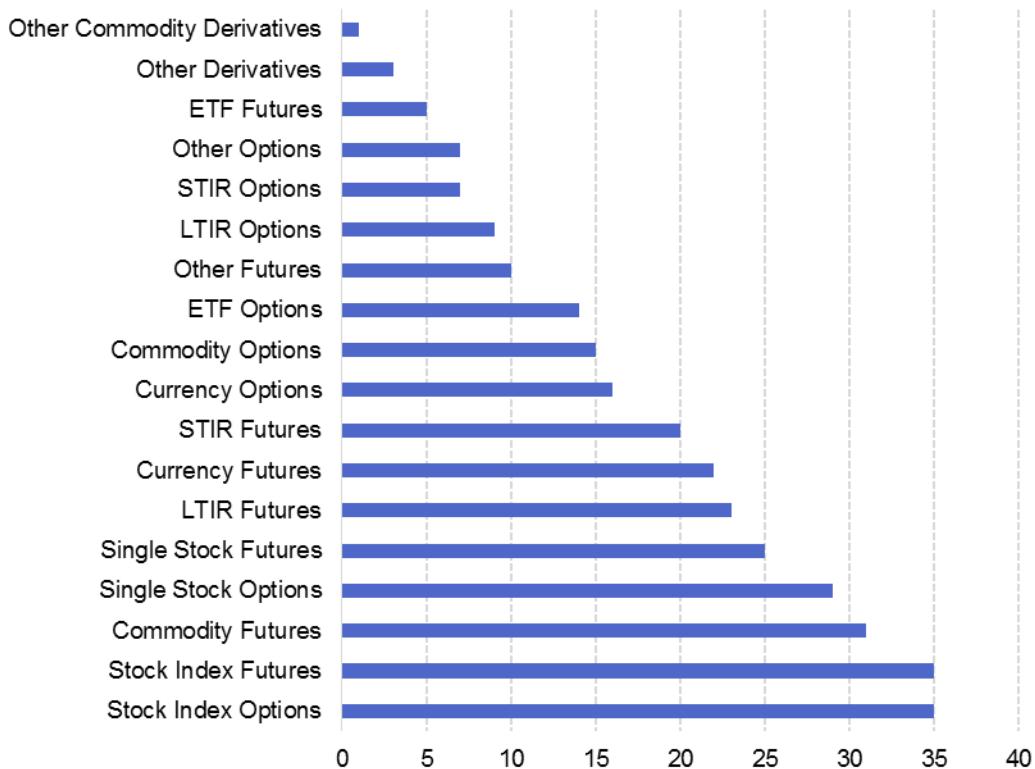

¹ Many newer, smaller regulated exchanges choose to become WFE Affiliates. The WFE Office requires that the regulatory authority of the applicant is already a member of IOSCO. However, Affiliate status does not imply fulfilment of WFE membership criteria and, unlike membership, is not subject to peer review or vote by the General Assembly.

² Correspondent members tend to be newer and smaller exchanges and enjoy observer status only. Correspondent members do not need to pass a WFE peer review nor meet the criteria required of full members.

Number of product lines per exchange in 2015

Number of trading venues by product line in 2015

Interestingly, however, as is apparent later in the report, despite the proliferation in venues and product types offered on these venues, trading volume and value for particular product types tends to be concentrated in a few venues. Similarly, within product types, a few products tend to account for a large proportion of the trading activity.

In line with traditional derivatives market structures, the majority of the WFE members have designated market makers who are responsible for providing liquidity to the markets (30 out of 38, who replied to this question). Member respondents provide a range of incentives for market makers with fee incentives being the most common. Other incentive types include bandwidth and participation rights.

Fourteen WFE members responded to the clearing related questions. Between them, they either own outright or have partial ownership of 43 Central Counterparties (CCP) and 29 Central Securities Depositories. Those that own a CCP (either partially or completely) clear 100% of the derivatives traded on their exchanges with four of them also clearing trades on behalf of other exchanges. Twelve of the 14 respondents indicated that they also clear OTC trades with interest rate products being the most commonly cleared.

3 THE GLOBAL EXCHANGE TRADED DERIVATIVES MARKET

Amongst the respondent universe, total derivatives traded were up 12% on 2014, reaching 23.4 billion derivatives contracts (10.3 billion options and 13.1 billion futures) traded. This is the first time that the total number of derivatives traded has exceeded the peak volumes experienced in 2011. Compared to 2011, total volumes traded are up 1.9% representing an annualized growth rate of 5% over the last three years.

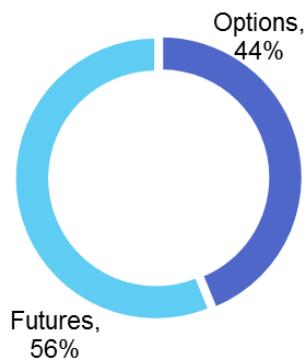

There was an increase in volumes traded across almost all product lines. Equity derivatives volumes were up 6%, while currency derivatives (reversing the trend in 2014) saw a sharp increase of 37%. Commodity derivatives volumes continued to increase reaching 4.3 billion contracts, representing a 26% increase on 2014. Within this, options contracts volumes rose by 6%, whilst futures increased by 28%. Interest rate derivatives meanwhile declined slightly by 0.1% driven predominantly by a decline in volumes of short term interest rates futures.

Total volumes of exchange traded derivative contracts over time

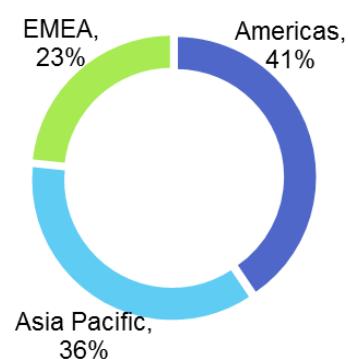

Regionally, volume growth was driven by the growth in volumes traded in the Asia Pacific region (up 36%) across currency, commodity and equity derivatives. In the EMEA region overall volumes traded increased by 12%. In the Americas however, volumes traded decreased by 1% mainly due to a decrease in volumes of stock options. As a result of the robust increase in Asia Pacific volumes, the Americas and Asia Pacific regions now represent 41% and 36% of total volumes respectively, followed by EMEA with 23%.

Breakdown by products in 2015

Breakdown by regions in 2015

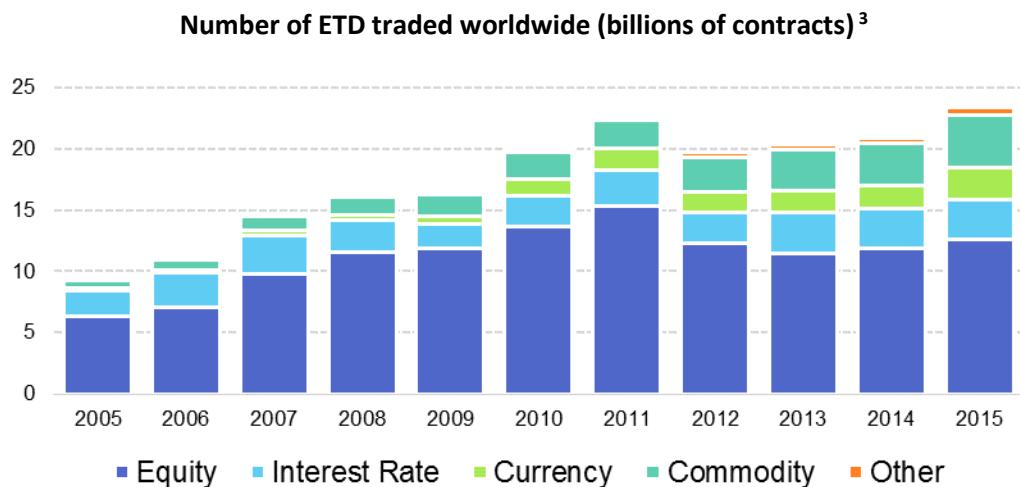

Equity derivatives: Overall, equity derivatives remain the most actively traded exchange traded derivative products though their contribution to overall volume traded has declined over time to just under 55% of the total traded. Equity derivatives volumes rose 6% in 2015 mainly due to increases in stock index options (+19%) and stock index futures (+17%). These were among the most actively traded derivatives products in 2015, accounting for just over half of all equity derivatives traded and for 28% of all exchange traded derivatives. The Americas and EMEA saw a slight decrease in equity derivatives of 4% and 1% respectively, while volumes traded in Asia increased by almost 30%.

Interest rate derivatives: Interest rate derivative volumes decreased by 0.1% in 2015 continuing the decline of 2014. The Americas region, which accounts for 66% of all exchange traded interest rate contracts, experienced a decrease of 2% in volume traded, while EMEA (representing 28% of total volume) saw a 1% decrease. The Asia Pacific region, which accounts for only for 6% of volume, saw an increase of 32%.

Currency derivatives: Currency derivatives experienced the most dramatic increase in 2015 (up 37%), dominated by the EMEA and Asia Pacific regions (representing 44% and 42% of all trading activity respectively). All regions experienced growth in the volumes of currency derivatives.

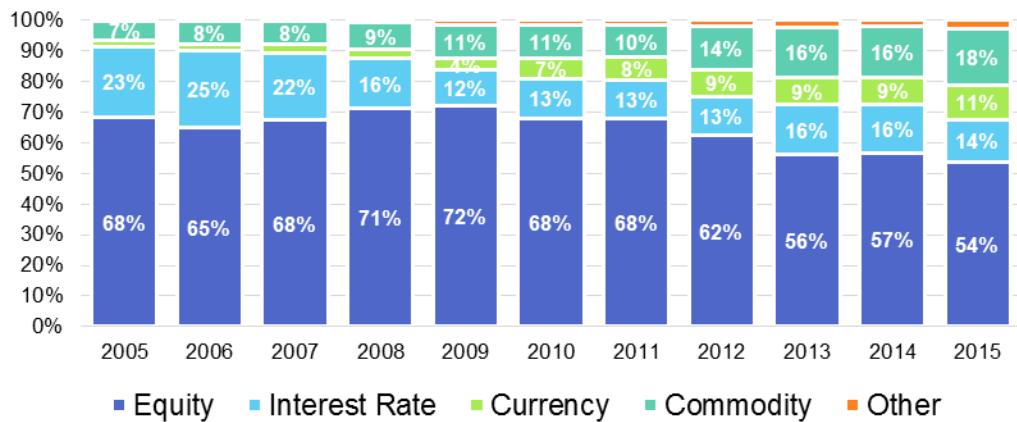

Commodity derivatives: Commodity derivatives saw a 26% rise in volumes in 2015 and commodity futures overtook single stock options to become the most traded contract in 2015.

Other derivatives: The “other derivatives” category comprises a wide range of products, including volatility index options, exotic options and futures, REIT derivatives, dividend and dividend index derivatives and CFDs. Volumes in this category increased significantly (51 %) in 2015, driven by the growth in volumes of can-do derivatives traded on the Johannesburg Stock Exchange.

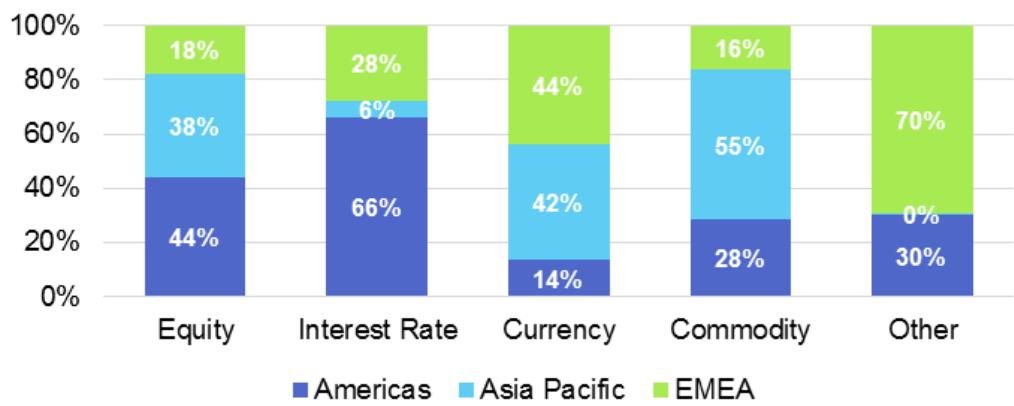

³ For purposes of these graphs, ETFs are included in Equity

Product composition over time by number of contracts traded

Grand Total	20 864	23 428	12%
--------------------	---------------	---------------	------------

⁴ For purposes of the rest of this report, ETF Derivatives are covered under the broader category of Equity Derivatives though obviously this product line references a range of underlyings beyond just equities.

⁵ "Other" options and futures includes products such as volatility derivatives, dividend, commodity index, carbon emissions and "can-do" options and futures. "Other derivatives" included ASX's CFDs, which represented 97% of traded volume in this category. ASX stopped offering these products in June 2014.

4 EQUITY DERIVATIVES

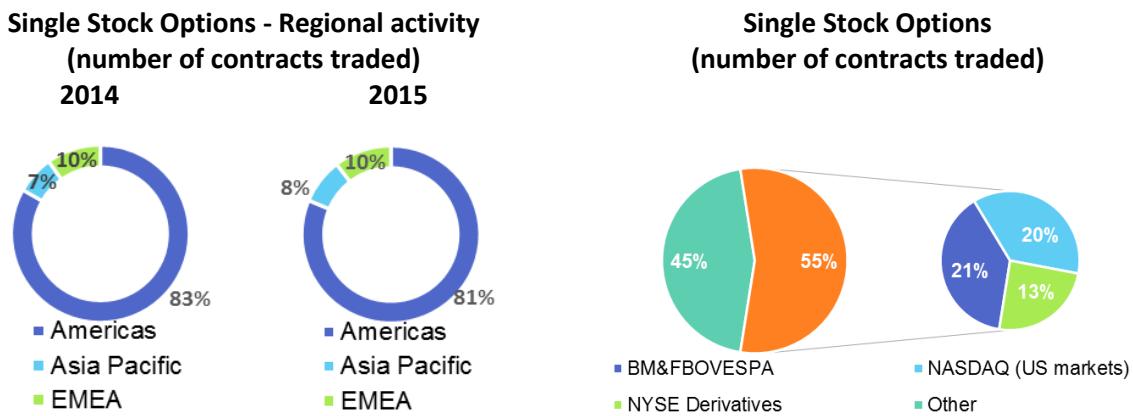

While the number of equity derivative contracts traded grew 6% in 2015, volumes are still below their 2011 peak. As can be seen from the graph below, total volumes traded increased steadily from 2005 until 2011, before dropping off post 2011. Volumes have picked up again over the last few years, driven mainly by a recovery in the growth in volumes of stock index options and futures. Equity derivatives still represent the majority of traded volumes (54% of total derivative contracts traded) though their proportionate contribution to total contracts traded has been decreasing since 2009, when they accounted for 72% of total volumes traded.

4.1 Single Stock Options

Despite declines in volumes traded (down 8% on 2014), single stock options remain amongst the most traded derivatives product with 3.5 billion contracts traded in 2015. Volumes represent 15% of all derivatives contracts traded. Looking at the different regions, the Americas (which accounts for over 81% of global volume traded) decreased by 2% and EMEA stayed on the same level, while the Asia Pacific region grew by 1%.

The market is fairly concentrated across exchanges with 55% of activity occurring on three exchanges, namely BM&FBOVESPA, Nasdaq - US and NYSE Derivatives.

Thousands of trades are provided in table.

4.2 Single Stock Futures

Single stock futures volumes increased 1% in 2015, though they remain (other than ETF futures) the least traded equity derivative product with total volumes at slightly less than 1 billion contracts.

The increase was mainly driven by the Asia Pacific region, where growth was 34% and as at end 2015, accounted for 45% of global volumes. EMEA, which still has the largest share of total volume traded at 55%, saw a decrease of 16%. Three exchanges accounted for 65% of total contracts traded in 2015 with Moscow Exchange still in the lead, despite a decline of 11% in volumes traded on 2014.

When looking however at value traded, Korea, followed by National Stock Exchange of India, were the largest venues, accounting for 37% of value traded.

4.3 Stock Index Options

Within equity derivatives products, stock index options saw the largest increase (19%) in 2015, reaching 3.7 billion contracts, with growth across all regions. Volumes in the Asia Pacific region grew the most at 24%, which was largely due to the increase of 79% in volumes at the National Stock Exchange of India. EMEA grew at 15%, while the Americas experienced growth of 7%. The Asia Pacific region dominates the market for stock index options, accounting for 75% of total of contracts traded.

While the National Stock Exchange of India accounted for nearly 50% of total global volumes, the exchange accounts for only 6% of value traded. The Korea Exchange used to be the largest exchange in number of contracts traded but this has declined since 2012, when the exchange began to increase the size of the contracts. Despite these changes, the Korea Exchange remains the second largest exchange in the world in terms of volume of index options traded.

Just as trading volumes are concentrated in a few venues, trading activity is further concentrated in a few headline products, namely Nifty Options (listed on the National Stock Exchange of India), KOSPI 200 Options on the Korea Exchange and EURO STOXX 50 Index options listed on Eurex.

6 INTEREST RATE DERIVATIVES

Interest rate derivatives contracts experienced a decrease in volumes of 0.1% to 3.267 billion in 2015, from 3.268 billion in 2014. LTIR futures and options volumes traded increased 4% overall in 2015, while STIR options and futures decreased by 4% and 3% respectively. Contrasting trends were observed between the regions: volumes traded in Asia Pacific increased by 32% while the Americas and EMEA decreased by 2% and 1% respectively.

Number of interest rate ETD traded worldwide (millions of contracts)

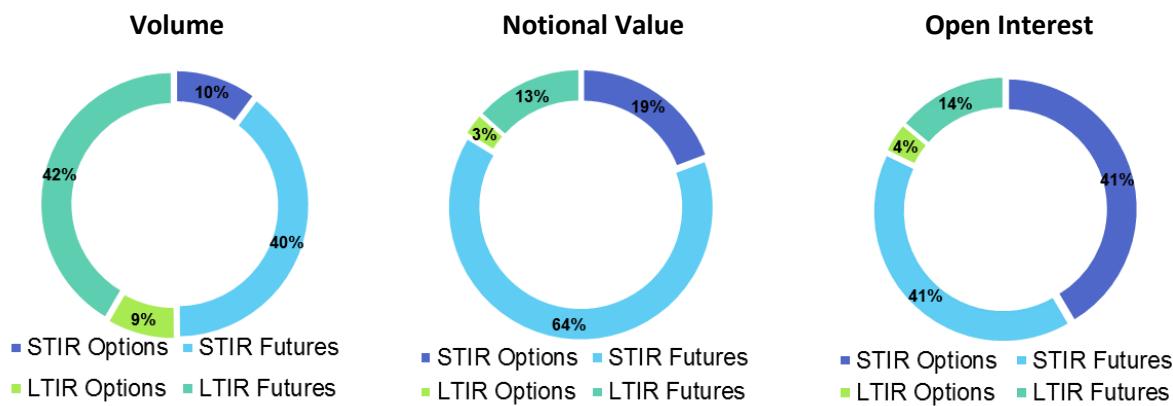

Product composition over time by number of contracts traded

The interest rate derivatives market remains highly concentrated, with the top 4 exchanges - CME Group, Eurex, ICE Futures Europe and BM&FBOVESPA - representing 92% of the total number of IR contracts traded in 2015. While, the CME Group remained the leader in the interest rate derivatives market, it experienced a 4% decrease in number of interest rate derivative contracts traded in 2015, bringing its share of total volume traded to 52%.

Finally, while STIR options and futures account for only 50% of total volumes traded, they make up nearly 83% of value traded.

2015 breakdown of Interest Rate product group by...

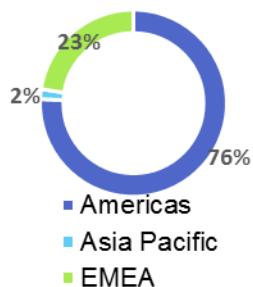

6.1 STIR Options and Futures

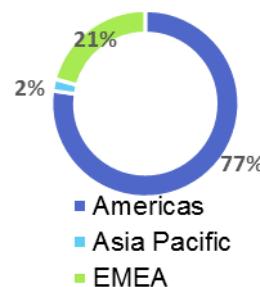

STIR volumes declined by 4% in 2015 to total 1.7bn contracts traded. Futures remained the most actively traded STIR contracts, representing almost 80% of the STIR market (1.3bn contracts). Three exchanges accounted for nearly 100% of the STIR volume traded in 2014, with the bulk of the activity (80%) concentrated in three contracts. The CME Eurodollar futures and options remained the most actively traded contracts (747m contracts), despite experiencing an 11% decrease in volumes on 2014.

* Table "Top 30 STIR contracts traded in 2015" does not include ICE Futures Europe contracts.

6.2 LTIR Options and Futures

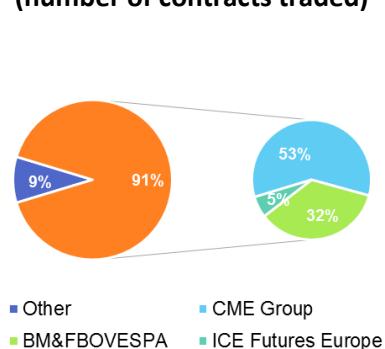

LTIR contract volumes were up slightly (3.7 %) in 2015, reaching 1.5 billion contracts traded. LTIR futures contracts remained the primary contract type traded (85% of the total), with LTIR options volumes amounting to 227 million contracts.

As with STIR contracts, the CME Group captures the bulk of the activity in this market (with 50% of total volume traded), despite a decrease of 3% in volumes traded on 2014. Eurex, the second biggest market, saw a 10% increase in volumes in 2015.

7 CURRENCY DERIVATIVES

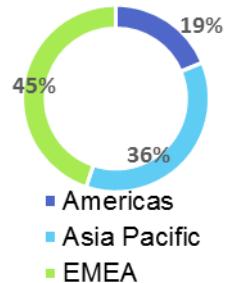

Currency derivatives volumes have increased sporadically but fairly consistently since 2005, with a 37% increase in volumes traded over the last year (up to 2.6 billion contracts). Volumes were up for both options and futures with increases of 108% and 28% respectively.

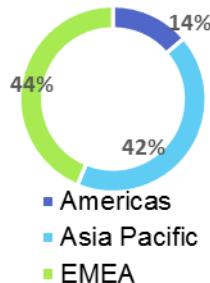

Asia Pacific and EMEA saw the largest increase in volumes (41% for both). The increase in the Asia Pacific region was driven by large increases at the National Stock Exchange of India (45%) and BSE India Limited (103%). The EMEA increase was mainly driven by the increase on the Moscow Exchange (34%). Despite this increase in volumes, Moscow Exchange's share of total global volume traded has decreased from 89% in 2014 to 39% in 2015. Volume traded in the Americas increased by 18% with CME Group and BM&BOVESPA representing the bulk of the volume traded in the region.

8 COMMODITY DERIVATIVES

Commodity derivatives volumes increased 26% in 2015, exceeding 4.3 billion contracts traded. This growth meant that commodity futures surpassed single stock options to become the most traded class of derivative contract in 2015, with over 4 billion contracts traded.

The increase in volumes was driven by an increase of 55% in the Asia Pacific region, coupled with smaller increases of 28% in the Americas and 16% in the EMEA region. The growth in the Asia Pacific region was mainly driven by the 34% growth in Mainland China, dominated by the Dalian Commodity Exchange and the Shanghai Futures Exchange. The Americas region is dominated by CME Group and ICE Futures US which account for 99% of the regional total. Over the period, while the CME Group saw a 16% increase in volumes traded, ICE Futures US experienced a 1% decline in volumes. Growth in the EMEA region was driven by ICE Futures Europe, with growth of 17% in number of commodity options and futures traded in 2015

Trading is concentrated in three exchanges with the Dalian Commodity Exchange, the Shanghai Futures Exchange and the CME Group accounting for over 70% of the volume traded in 2015. The most actively traded contracts were a mixture of agricultural, base metal and energy contracts.

* Table "Top 30 commodity contracts traded in 2015" does not include ICE Futures US, Shanghai Futures Exchange and London Metal Exchange contracts.

9 OTHER DERIVATIVES

“Other” derivatives experienced a significant growth of almost 50% (off an admittedly low base), driven by the 150% growth in volume of can-do options and futures listed on Johannesburg Stock Exchange. These derivative products now account for 65% of market volume in this category. Volatility index options and futures listed on Chicago Board Options Exchange and CBOE Futures Exchange decreased by 7% compared to 2014, however they still represent 30% of all volume. Other products in this category include dividend options, commodity index derivatives, equity index dividend futures, single stock dividend futures, and inflation and intellectual property futures.

10 ANNEX – TRADING STATISTICS

1. **Volume** (full number) is the number of contracts traded. A contract is a standard unit of trading denoted by the number of shares or the amount of capital that may vary from class to class, or from product to product, as defined by the exchange.
2. **Notional Value** (USD millions) is the number of contracts traded multiplied by the contracts' underlying value. Contracts underlying value is calculated by multiplying the market price of the underlying asset for each contract times the contract's multiplier. It is an approximate measure of the underlying value of the number of contracts traded.
3. **Open Interest** (full number) is defined as the number of contracts outstanding at a given time (close of trading at the last trading day of the year)
4. **Notional Outstanding Amounts** (USD millions) is defined as the monetary value of open interest.
5. **Number of trades** (thousands of trades) registered corresponds to the number of traded contracts that are registered and cleared by the clearing house.
6. **Option premium** (full number) represents the money paid by buyers to writers of calls or put options.

All figures are single counted.
