

Embargoed for release: 19th July 2021

FixSpec launch FIX workspace: a new integrated tool for FIX API development

FixSpec is excited to announce the launch of a new connectivity App called FIX Workspace, which brings FIX logs, digital spec-editing, and customer support tooling into a single, secure application. With the app due to go live on the 19th July, the company is pleased to announce its first customer, Connamara Systems, who were a large part of the beta testing process.

For full details about the new app and to get a license, please visit fixspec.com/fix-workspace

FIX Workspace lets connectivity teams build next-generation, digital FIX documentation quickly and easily; importing from logs or an existing Word file, and enriching from the FIX standards. This integrated tool also features a smart parser, integrated documentation editor, and secure way of sharing documentation with your customers and internal teams. **We believe it's the first integrated tool for FIX API development, QA, and customer support.**

Jim Downs, CEO of Connamara, said

“Connamara has a long history in FIX, being one of the originators of the QuickFIX project. As we continue to innovate our EP3 exchange platform, the ability to quickly connect customers via FIX is vital. FIX Workspace is a powerful tool which lets us write and maintain FIX documentation easily, creating QuickFIX data dictionaries as we go. From here, we can ensure that customers receive the correct version in a user-friendly format as well as use the integrated parser to troubleshoot issues. We look forward to using the FIX Workspace as we deliver efficient FIX connectivity for our EP3 customers.”
